

Vitamin E

dl-alpha Tocopherol

Product: **Vitamin E**
dl-alpha Tocopherol

Appearance: Premix for birdfood.

Mixing percentage: 1,00%

Description: Vitamin E acts as the first line of defence at the intestinal mucosa on immunoglobulin antibody production. Vitamin E is an antioxidant which prevents the fats in the body becoming rancid. Vitamin E is absorbed freely in the bowel but requires proper liver and pancreas function for digestion. It is stored in the liver and in plasma in blood. Plants high in oils provide adequate Vitamin E, but rancid fats e.g. wheat germ oil left in wheat will use up this vitamin from the body and create a deficiency. Deficiencies produce: White muscle disease - a muscular dystrophy. When this occurs in the gizzard the bird may pass undigested seed, Low hatchability due to a weakness in the pipping muscle of the chick, splayed legs, brain dysfunction, in coordination, infertility, odema, swelling around the neck, wings or breast.

Analyses :	dl-alpha Tocopherol	50.000mg
	L-lysine	10.000mg
	L-arginine	25.000mg
	Vitamine Stay-C	50.000mg
	Maltodextrin	865.000mg

Available in:: 150 gramme and 300 gramme tub.
