

DK AQUATIC HERBIVORE GEL

Complementary feed for herbivorous aquatic animals

This product is especially developed as a main diet for aquatic animals. It is designed to meet the nutritional requirements of herbivorous fish and turtles. The product is a powder to which water should be added to form a gel.

Features and Benefits of DK Zoological Aquatic Herbivore Gel

- * High fiber and moderate protein level, based on wild-type diets
- * Contains only plant based ingredients
- * Designed to meet the requirements of herbivorous fish and turtles
- * Developed in conjunction with specialised veterinarians and leading nutritionists
- * Easy storage because of low moisture level, no freezer needed
- * To create a diet for omnivorous fish: Combine with DK Aquatic Carnivore gel

Preparation

1. Mix, by weight, 40% (cold) water to 60% powder. Adjust mixture to meet desired texture and need.
2. Mix thoroughly with a spoon, fork or whisk for one minute to meet the desired texture.
3. Knead the gel into the desired shape or smear on an object/stone.

Feeding

The gel can be cutted into pieces and added to the water as is or in a 'feeding ball'. Another possibility is to smear the gel on an object when just prepared and put the object with gel in the water. Never feed more than the fish can eat in 30 minutes, this diet can be fed at a rate up to 50% of the animals' diet.

Packaging & Storage advice

2 kg bag
This product should be stored in a cool dry place. Prepared product can be stored in the fridge for two days, or in the freezer for three months.
