

WISBROEK WATERFOWL FLOATING

SUITABLE FOR:

Ducks, geese, swans and other waterfowl

Wisbroek Waterfowl Floating is a complete (floating) daily food for ducks, geese, swans and other waterfowl. During the unique extrusion process, the high diversity of raw materials is formed into delicious crunchy pellets under high pressure. Each pellet contains all the nutrients your bird needs to stay in good condition. Apart from the pellets, no extra additions are needed in the feed.

Only the highest quality animal and vegetable protein sources are used in this balanced recipe. A raw material such as linseed, for example, is an important source of omega-3. In addition, all the necessary fatty acids, amino acids, vitamins, minerals and other essential nutrients come from animal and vegetable protein sources of the highest quality. These ingredients help to support your bird's immune system.

FEEDING ADVICE

Ducks, geese and swans will never eat more than they need. This means that Wisbroek Waterfowl Floating can be given unlimitedly. The recipe is formulated in such a way that the birds always get enough nutrients. Especially in the colder winter period, it is very important for these birds to eat enough. On average, these birds need 35 grams of Wisbroek Waterfowl Floating per kilogram of body weight. In winter, this maintenance requirement is 1 to 1.5 times higher. In spring and summer, the birds may eat somewhat less pellets. This is because there are more insects and other natural snacks available to the birds during this period.

We recommend offering the food dry. Due to the extrusion process, the pellets do keep their shape in water. As a result, the pellets can also be given floating or soaked in water.

ANALYTICAL CONSTITUENTS

Crude protein	17%
Crude fat	4%

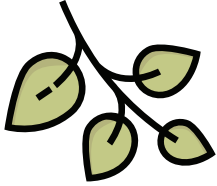

Store in a cool, dry
and dark place

Make sure the bird always
has fresh water available.

Not suitable for human
consumption, for animals only.
